

The R&A Seminar on Sustainable Golf Course Design, Renovation and Maintenance in Asia

Key summary points:

- Build a diverse and innovative stock of golf courses on waste land which deliver clear benefits for the environment and communities
- Build course that are more accessible, affordable and enjoyable
- Choose the right grasses, employing native grasses where they can provide the necessary playing quality
- Use a sustainable, and socially acceptable, water source
- Produce great and healthy golf turf and minimise the area of maintained turf; thereby reducing the use of water, fertiliser and pesticide
- Collect and share evidence of environmentally and socially responsible development and management, and gain recognition for your achievements through internationally credible certification, i.e. the GEO programme.
