

Demonstration project for an innovative system of erosion mitigation of coastline at risk

Start date: 1 January 2020

Project duration: 3 years

The objectives of this project are to:

- Prove up the concept system as an effective technique for the protection of coastal assets at risk.
- Construct a trial installation of the innovative system design.
- Acquire performance data over a three-year period as the subject of a PhD research project.
- Evolve and develop the system in situ based on experience gained.
- Provide proof of concept as a practicable and sustainable technique for mitigation of soft coastline erosion at acceptable cost and environmental impact.

This project will be delivered by Siskin Asset Management and Subsea Consulting Services.
